Recebido em abril de 2021 aceito em junho de 2021.

Abstract

This study presents Pa=i*te:r plant names organized by the folk groupings specified by the speakers interviewed. The data collection was with one speaker in 1993, 3 speakers in 2014, and one of the 2014 speakers in 2016. The 1993 speaker and the 2014-2016 speakers were from different villages, and their speech was not identical. Some other discrepancies may be due to my short time trying to hear Pa=i*te:r accurately.

Keywords: Ethnobotany. Rondônia. Paiter language.

Resumo

Este estudo apresenta nomes Paiter de plantas organizadas por meio de agrupamentos populares especificados pelos falantes entrevistados. A recolha de dados ocorreu junto a um falante em 1993, três falantes em 2014, e um dos falantes de 2014 em 2016. O falante de 1993 e os de 2014-2016 eram de aldeias distintas, e suas falas não foram idênticas. Algumas outras discrepâncias podem dever-se ao meu pouco tempo em tentar ouvir Paiter com precisão.

Palavras-chave: Etnobotânica. Rondônia. Língua Paiter.

Pa=i!te:r Plant Names

Investigator: Terrence Kaufman

1993 work in Porto Velho, Rondônia

Informant: Pedro Suruí /kabe!te:m/, Linha Onze, Rondônia, Brazil

¹ Professor Emeritus, Department of Anthropology, University of Pittsburgh. E-mail: kaanbahlam@gmail.com.

August 1993: 17 hours of data gathering, 3-11 Aug 1993; 1.5 hours of taping of names, 13-15 Aug 1993

How data was gathered

1. consult book: *Árvores de Manaus*
2. walk around SIL compound at Porto Velho (ca. 200 names in Paiter and Deni)
3. go through lists of plant-names in Brazilian Portuguese
4. free-association according to type of terrain
5. grouping by kin analogy (quais são os parentes de X?)

In Sep-Oct 2014 in Brazilia, I interviewed 3 Pai*ter speakers: Ura A&n Anderson Suruí, Joaton, and Luiz.

In Aug 2016, again in Brasília, I reinterviewed Anderson, and made some adjustments and additions to what I had gotten in 2014.

In 1993 I was in Porto Velho hosted by Dan Everett.

In 2014 and 2016 I was in Brazilia hosted by Ana Suelly Arruda Cabral.

Note: when Deni equivalents of Pai*ter terms were uncovered in 1993, the annotation Den. abc is found.

Rem. means 'remark'

XX

Key to Pai*ter spelling/transcription:

Spelling is partly phonetic and partly phonemic.

<8> = 'theta'

<\$> = 'esh'

<9> = 'eng'

<@> = 'barred i' or 'barred u'

<7> = glottal stop

<ty> = palatalized t

- <dy> = palatalized d
- <ny> = palatalized n
- <r> = alveolar flap non-finally, retroflex continuant finally
- <: > = vowel length
- <CC> = consonant length
- <&> = vowel nasality
- <!> = high pitch
- <'> = low pitch
- <_> = mid pitch
- <^> = falling pitch
- = devoiced [b]
- <D> = devoiced [d]

There are probably random errors in my transcription; I have faithfully reported the transcriptions I made on the occasions when I wrote them down.

XX

Outline of Pa=i*te:r ethnobotanical classification

Major Life Forms

TREE/ÁRVORE /7i!:b/ [1993,2014,2016] ‘pau, árvore’

‘flor(es)’ [2014,2016]

=====

PROBLEM: The total number of Pa=i!te:r plant names that were collected in 1993 was only about 210. This is half the number of animal names collected. The conclusion seems unavoidable that the Pa=i!te:r informant’s knowledge of the plants in his home place is seriously incomplete. The Deni informants I worked with knew roughly 450 plants and 500 animals. This in itself is considerably out of line for what would be expected for Meso-American Indians, who will under similar conditions of data-gathering will be able to provide about 400 animal names and 600 plant names, that is, 1.5 times as many plants as animals. The plant life of Amazonia is probably as diversified as that of Meso-America; the Deni practice horticulture, although without much enthusiasm. The Pa=i*te:r informant Pedro Suruí seemed to be conversant with cultigens, but not so much with wild plants. It may well be the case that horticulturalists simply do not know as much about the plants in their surroundings as agriculturalists do.

Ura Ñn Anderson Suruí in Aug 2016 told me that men plant, not women, and in fields, not gardens. This means agriculture, not horticulture, but desultory agriculture. Men also hunt. This makes me ask how these people fed themselves before 1969.
